FULL ESCALATOR MODERNIZATION

KONE EcoMod™
HOW IMPORTANT IS NONSTOP PEOPLE FLOW FOR YOUR BUSINESS?

If you run an airport, a metro station, or a shopping mall, you probably don’t want to close it down for an escalator modernization.

STAY OPEN FOR MODERNIZATION

KONE developed the KONE EcoMod™ solution so you can stay open during modernization. KONE EcoMod is a full escalator or moving walk modernization without removing the truss. You can eliminate costly structural modifications. You can forget about special crane hoisting or removal of the building facade. You can preserve existing building décor. In parallel installations, you can modernize one escalator at a time and keep people moving on the other one. So you can reduce the total project costs, and you can stay open for business during a modernization.

KONE EcoMod is a unique innovation in escalator modernization. Now, we’ve made it even better.

START WITH A COMPLETE INSPECTION

Before beginning a major modernization, begin with a thorough inspection. KONE Care for Life™ is an assessment of the condition of your escalator, showing the risks and development areas.
WHEN IS KONE ECOMOD THE RIGHT SOLUTION FOR YOU?

WHEN WORKING IN HARD-TO-ACCESS SITES
In a metro station, for example, it may be impossible to get crane access in order to hoist a new truss into place. With KONE EcoMod, there is no need to have access for a crane. With modular installation, parts are delivered just in time to the site, ready to be installed.

WHEN YOU WANT TO RETAIN EXISTING ARCHITECTURE
In a hotel or department store, for example, you may want to retain the existing appearance of the building. With KONE EcoMod there is no need to demolish floors, roofs and building facades. There’s less noise and dust, and less refinishing work required.

WHEN YOU NEED NONSTOP PEOPLE FLOW
The noise and dust associated with full replacement, including the truss, usually mean that the site must be closed. With KONE EcoMod, you can stay open for business. KONE has completed many projects in airports and metro stations, for example, while the site continued to operate.

KONE ECOMOD. WHAT’S NEW?
With the KONE EcoMod solution, you get an escalator that is more reliable and more eco-efficient, and requires significantly less time for maintenance. There are many small improvements and four big ones:

- Drive can be located outside or inside the step band
- Available with direct drive or chain drive
- Based on KONE TravelMaster™/TransitMaster™ platform
- Advanced installation method
FOUR BIG IMPROVEMENTS AND A WIDE RANGE OF ADVANCED FEATURES

DIRECT GEAR DRIVE

KONE EcoMod™ is available also with a direct drive output to the main shaft. There is minimal oil usage when using a lubrication-free step chain, so this is an eco-friendly solution as well. The direct drive also provides a superior level of ride safety and comfort for passengers.
KONE EcoMod is based on the KONE TravelMaster/TransitMaster platform, which offers many attractive designs, with a wide range of aesthetic, lighting and eco-efficiency options. After the modernization, your escalator will work and look like a new one.

ADVANCED INSTALLATION METHOD

Parts are delivered just on time, properly labeled and ready for installation. This is particularly important when the site is in normal operation, since the parts and crates will not take up so much space on a metro station platform, for example.

OPERATIONAL SAFETY ENHANCEMENTS

1. Enhanced controls
2. Escalator brakes
3. Pit covers switches
4. Reversal stop device
5. Step up thrust device
6. Handrail speed monitoring device
7. Missing step device
8. Step sag device
9. Handrail entry device
10. Comb impact device
11. Broken step-chain device
12. KONE EcoStart (optional)

PASSENGER SAFETY ENHANCEMENTS

13. Skirt gap and stiffness
14. Demarcation inserts
15. Emergency stop buttons and alarm
16. Step demarcation lights
17. Safety lights
18. Skirt brushes
19. Deck guards
20. Yellow comb segments
FEATURES AND BENEFITS

1. **SLIM DESIGN**
The slim design makes this solution ideal for modernization – you may be able to increase the step width from 600 to 800 mm, without taking any extra space.

2. **SAFER AND CLEANER**
KONE offers numerous safety options, such as a motor speed sensor, motor thermal protection, skirt deflector brushes, and handrail speed monitor. The lubrication-free step chain means there is less cleaning and maintenance, and reduced fire hazard. The KONE EcoMod meets or exceeds worldwide escalator safety code requirements, including JIS, ASME, EN115, and B44.

3. **ECO-EFFICIENT**
The KONE EcoMod includes several features and options that can dramatically reduce electricity consumption. LED lighting, for handrail, skirt or comb lighting, can significantly reduce energy costs. Standby operation reduces speed or stops the escalator when there are no passengers. The KONE EcoStart option can cut electricity costs by 20-40%.

4. **COST-EFFECTIVE**
There are fewer structural modifications and less refinishing of the building, so the total project costs are usually lower with KONE EcoMod than for full replacement.

5. **AESTHETICS**
You have a wide selection of handrail colors and step, cladding and decking finishes.

6. **SPUR AND HELICAL GEARAS**
The spur and helical gears provide high efficiency – more than 94% at rated load – reducing electricity consumption.
WHY MODERNIZE?

Take a look at the escalators in your facility. Do they cause:
- High maintenance and repair costs
- Limited spare parts availability
- Increased downtime and lost revenue
- Non-compliance with modern safety standards
- High liability risk
- Ecological non-compliance
- Poor ride comfort
- Constant cleaning and housekeeping needs
- An old-fashioned look and feel
- Passenger dissatisfaction

If you have experienced some of these difficulties, modernization with the KONE EcoMod™ can improve service, safety and eco-efficiency, and the perceived value of your property.

WHAT ABOUT COMPATIBILITY?

KONE EcoMod is compatible with all KONE escalators and moving walks, and with most escalators from other brands. For other brands a survey would be conducted to assure compatibility, but KONE has modernized the following truss types with KONE EcoMod: O&K, Montgomery, Westinghouse, Otis, Schindler, Thyssen, Hitachi, Goldstar, Fujitec, Peele, FIAM and more.

KONE ECOMOD OR FULL REPLACEMENT?

Depending on your requirements, KONE will offer the most suitable solution. In some cases, full replacement will be required, but often KONE EcoMod is the most cost-effective solution.

MODERNIZATION PROCESS

Modernizing an escalator is not a decision you want to make overnight. Before you get started, we want to help you make sure that KONE EcoMod is the right solution for you. We have been involved in many projects in airports, shopping centers and transit centers that remained in operation, so we understand the importance of maintaining continuous people flow during the project. Our job is to anticipate your needs and ensure that the project proceeds as smoothly as possible – for you and your customers.

Your project is in good hands – when modernizing with KONE EcoMod, KONE has won the “Elevator World” modernization project of the year award, five years in a row.

SITE ANALYSIS

Every escalator is different. The first step is an analysis of your equipment and the special features of the site. Site analysis assesses the best method of dismantling the old installation and installing the new equipment. It also includes an analysis of people flow. KONE has developed tools to analyze people flow in a building, to help maintain normal flow during the project. In side-by-side installations, one of the escalators can remain in operation while the other one is being modernized.

PROJECT PLAN

KONE develops a tailored plan for each project. The main issues are scheduling, safe routes for building users, and installation phases. KONE can schedule work during off-peak periods, for example on weekends or at night, in order to minimize disturbance to passengers. Parts are delivered as needed, ready to be installed, in order to reduce the amount of equipment storage on site and minimize obstruction to passengers.

INSTALLATION AND HANDOVER

The escalator modernization is protected with barriers to minimize any safety risk for passengers. KONE keeps the customer and end-users informed about the progress of the project and the installation phases. KONE also takes care of the safe, environmental recycling or disposal of the old equipment. After handover, we can ensure that your modernized escalator continues to operate reliably in the future, with regular, preventive KONE Care™ maintenance.

“We selected KONE to replace our escalator for two key reasons: the exceptional value that they provide and the minor disruption of service during construction.”

Bob Kingston, Assistant Director, Department of Aviation – Facilities, Clark County, Nevada, USA
REFERENCES WORLDWIDE

Since the introduction of the KONE EcoMod™ in 2002, KONE has modernized more than 700 escalators in metro and railway stations, airports and retail centers worldwide.

EUROPE
- Frankfurt Metro (VGF), Germany
- Hannover Metro (Üstra), Germany
- Ruhrgebiet Metro (VRR), Germany
- Rotterdam Tram (RET), Netherlands
- Rome Metro, Italy
- Dortmund Railway, Germany
- WH Smith, UK
- Marks & Spencer, UK
- Sainsbury, UK
- Boots, UK
- DLSC, Ireland
- Helsinki Railway, Finland

NORTH AMERICA
- Moscone Convention Center, San Francisco
- O’Hare Int. Airport, Chicago
- McCarren Airport, Las Vegas
- WMATA, Washington
- SEPTA, Philadelphia
- Dillard’s Shopping
- Hyatt Hotels
- BMCC, New York

ASIA
- Harbour Front Centre, Singapore
- Carlingford Court, Australia
McCarran International Airport serves more than forty million passengers a year. During the modernization of four escalators, passengers had to be able to get to their gates, safely and conveniently. With the KONE EcoMod solution, KONE modernized one escalator at a time, while the others operated normally, so there was minimal disruption to passengers. The solution also saved money, since less structural engineering and refinishing work was required.

### ROME METROPOLITANA METRO

**Segment:** Infrastructure  
**Completion year:** 2010  
**KONE solution:** KONE EcoMod™ escalators

The city of Rome has an immense architectural heritage, both above and below ground. When the time came to replace the escalators in the Metro, it was important to preserve the existing décor and masonry. The KONE EcoMod solution minimized disruption to the architecture, while enabling the metro stations to remain in operation during the project.
KONE provides innovative and eco-efficient solutions for elevators, escalators, automatic building doors and the systems that integrate them with today's intelligent buildings.

We support our customers every step of the way; from design, manufacturing and installation to maintenance and modernization. KONE is a global leader in helping our customers manage the smooth flow of people and goods throughout their buildings.

Our commitment to customers is present in all KONE solutions. This makes us a reliable partner throughout the life cycle of the building. We challenge the conventional wisdom of the industry. We are fast, flexible, and we have a well-deserved reputation as a technology leader, with such innovations as KONE MonoSpace®, KONE NanoSpace™ and KONE UltraRope®.

KONE employs close to 52,000 dedicated experts to serve you globally and locally.
